XRAM Acc No: C84-041481

Antiinflammatory 4-hydroxy-2-thiophene carboxylic acid derivs. - useful
intermediates for medicines and pesticides, and as medical drugs
Patent Assignee: MITSUBISHI PETROCHEMICAL CO LTD (MITP); MITSUBISHI YUKA
YAKUHIN KK (MITP)

Number of Countries: 001 Number of Patents: 001

Patent Family: *Publication*

Local Applications (No Type Date): JP 82153595 A 19820903

Priority Applications (No Type Date): JP 82153595 A 19820903

Patent Details:

Patent	Kind	Lan	Pg	Filing	Notes	Application	Patent
JP 59042375 A			9				

Abstract (Basic): JP 59042375 A

Cpds. of formula (I), their salts and esters are new, and have
antiinflammatory effect: (R1 is H or 1-4C alkyl; R2 is H, 1-6C alkyl,
opt. substd. phenyl, benzoyl, or substd. benzoyl).

42.8% inhibition of carrageenin edema is exhibited in rats when
(I) is administered in an oral dose of 25 mg/kg. In an example, 200 mg
of 4-hydroxy-5 -phenyl-2-thiophene carboxylic acid ethyl ester (0.76
mmol) was dissolved in 2 ml of 1N NaOH. To this mixt. 0.1 ml of
dimethyl sulphate (1.0 mmol) was added dropwise under stirring. The
reaction mixt. was heated under reflux for 2 hrs. After cooling, 5 ml
of 10% NaOH aq. soln. was added and stirred at room temp. for 1 hr. The
mixt. was adjusted at acidic pH with 10% HCl, extracted with ethyl
acetate, and conc. When the residue was recrystallised from
cyclohexane-toluene (1:1). 106 mg of 4-methoxy-5 -phenyl-2-thiophene
-carboxylic acid was obtnd.

Title Terms: ANTIINFLAMMATORY; HYDROXY; THIOPHENE; CARBOXYLIC; ACID;
DERIVATIVE; USEFUL; INTERMEDIATE; MEDICINE; PEST; MEDICAL; DRUG

Derwent Class: B03; C02

International Patent Class (Additional): C07D-333/32
